

SAFE Visitor Manager: One Visitor Management System to Globally Register, Approve, and Enroll Visitors Into All PACS

QUANTUM SECURE

SAFE Visitor Manager (VisMan) is Web based enterprise-class software that unifies all of your global visitor management, visitor check-in, printing and centralized reporting functions. SAFE VisMan is purpose-built to replace paper-based guest book or disparate visitor management solutions to provide an easy way to centrally register, approve, and enroll visitors into virtually any building (or PACS) - anywhere in the world. VisMan provides flexible enrollment, validation, and processing of individuals in need of temporary or long-term access.

SAFE Visitor Management's Wizard-based, "no training required" system simplifies visitor management functionality from disparate PACS under one easy-to-use interface.

STREAMLINE WORKFLOW APPROVAL PROCESSES

SAFE VisMan provides a powerful and easy-to-use visitor management request and approval solution. The simple Web interface for submitting requests across the management chain, minimizes data entry mistakes and expedites approval processes. Intuitive process and form creation, routing definition and tracking tools virtually eliminate manual request and approval processing. No other solution on the market today provides such ease of use and functionality in a single visitor request and approval management system.

SIMPLIFY VISITOR MANAGEMENT FUNCTIONALITY

SAFE VisMan makes visitor enrollment processes quick and easy by enabling authorized employees or security personnel to pre-register visitors, groups, or employees via a Web browser. Users can modify and update registration information as needed, specify recurring visits, access levels, and provide special instructions for receptionists. SAFE VisMan makes the sign-in process much faster and less taxing for both the visitors and the front desk personnel. Visitors can be pre-registered by any business manager, reception staff and/or security personnel with the proper access to SAFE Visitor Manager Web portal. A wizard-based approach ensures that any authorized personnel can use SAFE, without time-consuming and tedious user training required. Pre-registration information is stored as a "pending visitor" until the expected date of arrival and badges may be printed ahead of time to expedite distribution, or as visitors arrive.

SAFE VisMan At-A-Glance

SAFE VisMan is part of the SAFE Identity Management Platform, which enables security operations to manage identities within disconnected physical security systems and integrate them under unified policies that align with enterprise IT systems including SAP, PeopleSoft, IDMS systems, LDAP, and Active Directory.

Conveniently accessible and managed through a Web browser, SAFE VisMan gives physical security operations an easy way to provide:

- Streamline Workflow Approval Processes
- Simplify Visitor Management Functionality Under ONE System
- Cost-effective Business Value
- Policy Compliance and Reporting
- Physical Identity Management

COST-EFFECTIVE BUSINESS VALUE

SAFE VisMan reduces security operational costs and eases daily administration burdens on staff such as entering, updating and deleting information into different PACS. And because you are only using one visitor management system across all your PACS, tedious paperwork and data entry mistakes are virtually eliminated, providing timely responses to requests, and contributing cost-effective, convenient, and flexible services to the overall business. SAFE VisMan comes ready to use, out-of-the-box and can be configured uniquely based on a company's security policies, traffic volume, and business needs.

POLICY COMPLIANCE AND REPORTING

SAFE VisMan enforces policy-based PACS clearance assignment based on badge template selected. SAFE aligns PACS directly to security policies configured in logical systems, ensuring that visitor access rules are adhered to across the enterprise. SAFE provides powerful reporting and tracking of visitor sign-in/out activity capabilities, enabling companies to keep an audit trail of visitor access. SAFE VisMan also generates compliance and operational reports that provide the ability to aggregate and correlate visitor registration data across multiple sites.

PHYSICAL IDENTITY MANAGEMENT THAT WORKS WITH YOUR IT INFRASTRUCTURE

The SAFE Integration Platform bridges the gap in identity lifecycle management between IT and physical security domains. With SAFE, identities created and managed within HR, ERP and IT systems can now be rolled into a seamless and automatically administered process, ensuring compliance with various regulations and enhancing security. What was once a redundant and costly effort of designing and deploying user management and security for controlling access to different physical environments is now simplified through a common integrated framework that works for both physical and IT security departments.

KEY FUNCTIONALITY

- Easy to install and deploy, web-based access and setup
- Enterprise-wide, web-based visitor pre-registration system
- Automated capturing visitor prerequisite such as Insurance, General Liability, etc.
- "No training required" Wizard-based approach
- Enterprise-class, scalable central administration - from a single system to a network of hundreds
- HR database or Active Directory integration
- Feature-rich and fully customizable Kiosk Mode for self-registration
- Browser-based pre-registration management for visitors, groups, or employees
- Easy modification and updates of registration information as needed - specify recurring visits, access levels, and provide special instructions for receptionists
- Centralized requests from multiple enrollment stations/ web portals/kiosks stations and sends requests to centralized or distributed printers.
- Ability to print visitor badges using standardized badge template
- Policy-based PACS clearance assignment based on badge template selected
- Compliance and operational reports generation to aggregate and correlate visitor registration data across all multiple sites

ABOUT QUANTUM SECURE, INC.

Quantum Secure, Inc. is the leader in physical security and IT interoperability convergence. Our solutions address the challenges associated with diverse, disjointed and proprietary physical security infrastructure often found at enterprises and government agencies. Quantum Secure offers packaged software products that provide a single, fully interoperable and integrated physical security policy platform where data from various physical security systems are aggregated and normalized in real time. Quantum Secure's enterprise applications provides out of the box configurations and business processes ready for deployment. ROI is often realized within months by lowering cost of operations, response times to events / crisis and increasing regulatory compliance and security.
