Adobe Chooses Quantum Secure for Policy-based Physical Identity Management and Compliance

Las Vegas NV (ISC West 2008, April 2, 2008) — Quantum Secure, Inc., the leading provider of Physical Access and Identity Management Systems convergence announced today that Adobe Systems Operations has chosen Quantum Secure's SAFE Physical Identity Management System (PIDMS) to automate provisioning and enhance compliance management.

“Quantum Secure's SAFE PIDMS is designed with physical security operations in mind,” said Mark Domnauer, corporate security director at Adobe. “SAFE simplifies time-consuming tasks like provisioning/de provisioning new employees, reporting, and meeting compliance. Access privileges and roles assigned within our IT/HR systems are aligned with those in our physical access control systems (PACS), providing better office space utilization and worker lifecycle management for Adobe.”

Using SAFE, Adobe can consolidate information from HR, IT, and physical security systems and processes, providing transparency and control from a single Web-based dashboard that is easy to integrate, use, and manage. Adobe Security Operations plans to use SAFE to automate PACS card holder provisioning, administration, reporting processes for new hires, terminations, change requests, and compliance based on security policies. SAFE integrates with Adobe's existing directory structure, employee database and physical access control system to facilitate the execution of business rules and provide a common repository for security audits and reporting.

“It's an imperative today for security organizations to demonstrate the business value and efficiencies,” said Ajay Jain CEO and President of Quantum Secure. “Converged physical and logical security, sustained compliance, faster response times, and lower TCO are just some of the returns on investment with Quantum Secure. Companies like Adobe are demonstrating that it can be done cost-effectively — without ripping and replacing — for a positive impact on the bottom line.”

About Quantum Secure, Inc.

Quantum Secure, Inc. is the leader in physical security and IT interoperability convergence. Our solutions address the challenges associated with diverse, disjointed and proprietary physical security infrastructure often found at enterprises and government agencies. Quantum Secure offers packaged software products that provide a single, fully interoperable and integrated physical security policy platform where data from various physical security systems are aggregated and normalized in real time. Quantum Secure's enterprise applications provides out of the box configurations and business processes ready for deployment. ROI is often realized within months by lowering cost of operations, accelerating response times to events / crisis, and sustained compliance.
